SUMMARY REPORT OF SAMPLING
PAINT FOR LEAD

INTRODUCTION
On February 17, 2021 Environmental Assistance Group represented by Ed Kennedy, Certified Lead Professional (CLP) collected samples of paint materials from Andersen Elementary School 1900 Port Seabourne Avenue, Newport Beach California 92660 in the Newport Mesa Unified School District. Samples were taken of loose and peeling paint on the siding, to be analyzed for lead content because the paint will be disturbed during new paint application.

METHOD
The lead paint chip samples were scraped or pulled off and were placed in leak tight containers and transported to a NVLAP and DHS certified laboratory, SGS Forensic Laboratories in California. The paint samples were analyzed by Flame AA. After analysis, the results were provided for inclusion in this report.

RESULTS
The Grey paint on the siding is below the level of detection.

RECOMMENDATION
No special handling is necessary because of the absence of significant quantities of lead in the paint.

Eldwin “Ed” Kennedy, /CAC 93-1249, CLP 4092

Beatriz Hinojosa, Laboratory Supervisor, Carson Laboratory

Analytical results and reports are generated by SGS Forensic Laboratories at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by SGS Forensic Laboratories to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by SGS Forensic Laboratories. The client is solely responsible for the use and interpretation of test results and reports requested from SGS Forensic Laboratories. SGS Forensic Laboratories is not able to assess the degree of hazard resulting from materials analyzed. SGS Forensic Laboratories reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. Any modifications that have been made to referenced test methods are documented in SGS Forensic Laboratories' Standard Operating Procedures Manual. Sample results have not been blank corrected. Quality control and sample receipt condition were acceptable unless otherwise noted.

Note: Sampling data used in this report was provided by the client as noted on the associated chain of custody form.
